SKILLS

Python | C | C# | Java | JavaScript | Node.js | React | OOP | MySQL | MongoDB | Git | Docker | VirtualBox | REST APIs | Wireshark | Claude Code | Anthropic API

MILITARY SERVICE

- Commander - Golani Brigade
- Held multiple leadership roles during service
- Participated in 'Zuk Eitan' operation as a commander

LANGUAGES

Hebrew	Native
English	Full Professional

Profile

Driven and technically skilled Software Engineering (B.Sc), with hands-on experience in programming, networking, and Linux. Strong foundation in Python, Java, C, Bash scripting and OOP. Experienced in client-server architecture and database management. Security clearance: Level 3 (Top Secret) Valid.

Education

2021 - Present

Software Engineering - Braude College

- Final-year student, only final project remaining - open to full-time roles.
- Moshal Program member: selected for a unique international program empowering ambitious undergraduate students with high academic potential.

Experience

09/2025 - Present

IT Help Desk & Technical Support - Elbit Systems

- Administered enterprise systems using SCCM, Active Directory, and Azure AD for identity and device management.
- Managing user accounts, permissions, and access rights across a large-scale enterprise environment.
- Troubleshooting complex technical issues in a multi-disciplinary technological ecosystem.

2016 - 2020

Technical Support Instructor - Bezeq

- Four years in technical support within the networking and communications field.
- Hands-on work with routers, switches, and network monitoring tools.
- In-depth knowledge of networking protocols: TCP/IP, DNS, DHCP.
- Trained and mentored new employees to foster team growth and efficiency.

Projects

Information System Change Management - Semester Project

- Requirements analysis, UML diagram design, and functional prototype.
- Developed server-side in Java integrated with a MySQL database via JDBC.
- Designed and implemented the client-side interface using JavaFX.
- Managed code and collaboration using GitHub.

LinkedIn Job Scout - Personal Project

- Built an autonomous AI-powered job-scouting agent in Python that automatically searches LinkedIn, rates listings, and delivers ranked results by email.
- Automated LinkedIn browsing with Playwright (headless Chromium) and cookie-based session persistence to avoid bot detection.
- Integrated Claude AI (Anthropic API) to score each job 0-100 against the candidate's CV; built a modular pipeline orchestrated by APScheduler.
- Persisted job state in SQLite to prevent duplicate notifications; built a Flask dashboard for configuration. Developed using Claude Code.
